Dual serial port

**Industrial
M2M Router &
Data gateway**

RS232/485/422 serial ports.

The dual serial port extension card offers OEMs and system integrators the ability to interconnect and retrieve data from serial devices. As a transparent gateway, the eWON Flexy is the link between any serial devices or PLCs and the Ethernet LAN. As a data acquisition gateway, the eWON polls the serial devices at defined intervals to feed its internal memory tags with live and time-stamped data.

About Flexy:

The eWON Flexy is the first industrial modular M2M router and data gateway designed for OEMs and system integrators. Its flexibility allows remote devices to be linked in an environment where communication technologies are constantly changing, and lets you communicate universally with the most varied field equipment, regardless of the protocol used.
